EDUCATION

DigitalCrafts

Atlanta, GA

Full Stack Software Development Bootcamp

Graduation date: Nov 9, 2023

- DigitalCrafts is a top-rated Bootcamp offering training, up-skilling, and job placement services for students and clients across the US.

WORK EXPERIENCE

City of Refuge Hackathon

Atlanta, GA

Back-End Developer

Sep 30, 2023

- Focused on back-end development, where I took charge of creating models, migrations, and seeders using Sequelize, a powerful ORM tool. I designed and implemented essential GET and POST routes to enable smooth data retrieval and manipulation.
- Integrated Express sessions to enhance user authentication and security, contributing to the overall success of our project.

Gwinnett Soccer Association

Dacula, GA

Head Coach

July 2018 - Present

- Researched and developed effective training programs to improve player skills and performance.
- Created winning game strategies and evaluated opponent teams for tactical advantages.
- Collaborated with assistant coaches to review player progress and maintain team cohesion.

Davis Turnkey: Construction Services

Norcross, GA

Contractor

July 2018 - January 2023

- Generated detailed project plans and analyzed cost-effective materials for construction.
- Reviewed and maintained project timelines, ensuring on-time project delivery.
- Presented recommendations to clients and collaborated on problem-solving during the renovation process.

La Parrilla Mexican Restaurant

Peachtree Corners, GA

Server

2016 & 2018

- Collaborated with the kitchen staff to ensure accurate and timely order delivery.
- Analyzed customer preferences to generate upsell opportunities and increase sales.
- Maintained a friendly and communicative atmosphere to provide exceptional service.

PROJECTS

[Dev Town Case Files](#) | [Github](#) | React | Express | Node.js | PSQl | Sequelize | Javascript | HTML | CSS | GIT | Bootstrap | Postman

- Dev Town Case Files is a murder mystery text-based game where you need to solve the case before time runs out! On this project I mainly worked on the back end making sure our routes worked properly and our data was fetched successfully. I also worked on the front end ensuring context was being passed correctly and user information was being displayed.

[Media Flare](#) | [Github](#) | Javascript | HTML | CSS | GIT | Bootstrap | Postman

- Front end project. Simple movie and tv show generator for whenever you're unsure of what to watch or you want to leave your viewing option to chance!

Coach App | [Github](#) | Javascript | React | HTML | CSS | GIT | Bootstrap | PSQl | Sequelize | Express | Node.js

- Currently working on an application that coaches can use to plan their coaching sessions and also track their teams progress. They'll be able to create a team, their rosters and it will track their stats as they progress through the season. Still a work in progress but can be tracked in my GitHub.
